Rp_framework_vs_drupal

SI	RP Framework	Drupal Framework
1	It is a CMS as well as application development framework. You can develop simple information website as well as large multi-module custom web application.	It is the same
2	Clear separation of business, application and display logic	It is the same
3	Custom CMS, codes can be used by the RP customers only	Open source and codes are open to all including hackers
4	The basic CMS, cart and some more popular modules are readily available. Any extra module must be developed from scratch.	You can quickly start a new website buy assembling the right 3rd party modules.
5	Minimum cost to develop a custom module	More cost to develop a custom module as the system is not taht much flexible.
6	No maintenance issue due to version conflict (for any future change and addition) as all the modules are developed by RP itself	Can be an issue. Drupal Core Version upgrade can cause compatibility problem with an existing 3rd party plugin.
7	Right for websites / web applications that require more custom modules and/or future modifications	Right for web application that can be built using ready modules and you may not need much changes in the business logic
8	Highly secure and not prone to security hacks. No upgrade trap.	Basic security system is high. But since it is open source you need to upgrade with every version upgrade.
