## Build Large PHP Applications with Yii Framework

Why use Yii framework for developing large PHP applications? Why use frameworks at all? The answers are here

The web development process for large custom web application reasonably differs from developing a CMS website or a shopping cart website.

A common CMS or a shopping cart store is never built from scratch because 95% chance is there they made a similar application. So, a developer starts with an open source or own built CMS / cart website and simply customizes as per the new requirement. It hardly requires change in database. So newbie developers without any system designing knowledge can build a stunning website or a large store. So it does not require any framework like Yii.

Whereas the process of developing a unique custom application needs to be done from scratch as no two projects are same. It requires new tables and new modules.

The bottom-line for a custom application are

1. Meets all the business requirement
2. Must be secured and reliable
3. Must be high performing even under high load
4. Must be completed within a tight schedule
5. Must be easy to maintain in future

However if the system architect starts to re-invent everything the project will take years. Here the role of a framework comes. The framework only defines the application logic such as architecture, code library, tools those can be used to reduce the development time. It ensures the application performance, basic security and future friendliness. But the business logic layer is laid by the system architect only.

Yii framework is great if we consider all these. You do not need to bundle with that you do not need. It ensures high performance and security. It provides a solid MVC architecture that can be managed easily in future. It has tools like Git that allows you version management of project files when working in a team. Gii generates codes that make the development rapid.

Yii framework projects can not be done by newbies. Any attempt will reduce the project quality.

We claim to be a reliable Yii Development company in India. We have several team of experienced Yii developers led by 8-12 years experts in managing a large PHP project of any complexity using Yii. In fact while recruiting for Yii projects we recruit Yii Developers with only above average merit.

### Cost of hiring a Yii Developer

### **Dedicated Monthly**

Developer will work only on your project and you have full control on managing his work.

Type of developer	Exp Level	Monthly Cost in \$
Project manager cum Analyst	5 to 10 years	1500 to 2000
Senior Developer	3 to 6 years	1200 to 1400
Team Developer	2 to 4 years	900 to 1100

### **Virtual Dedicated Monthly**

At a particular point of time either developer or system analyst is working on your project. Total 160 hours work that combines developers and project manager's hour.

Type of developer	Monthly Cost in \$
With Senior Developer	1300 to 1500
With Team Developer	1000 to 1200

### **Part Dedicated Hiring Rates**

You must have a commitment for a month in advance (say \$x number of hours).

Resource Type	Hourly Rate in \$		
	10 to 19	20 to 49	50 or More
Monthly Hours->			
Team Developer	9	8	7
Senior Developer	12	10	9
Project Manager / Analyst	16	14	12

### **Usage Based Hiring**

No monthly commitment, will be billed as you go

Resource Type	Hourly Rate in \$

Volume (Hrs)	<10	10 to 20	20 to 50	50 or More
Team Developer	11	10	10	9
Senior Developer	14	13	12	11
Project Manager / Analyst	16	15	15	14
