

Responsive Websites

There is only one difference between a normal website and a responsive website. A normal website is optimized for specific screen resolution, screen height and screen width. Say for a 1024x768 screen. So if a visitor views this website on his tablets or mobile or any device that has a lower screen width set, he will see a horizontal scrollbar.

But a responsive website is optimized to be displayed on any screen setting. It first reads the screen setting and adjusts the website display accordingly. So you never see a horizontal scrollbar when you are viewing a responsive website. It does not really matter if you're viewing it using your android phone or using a desktop or a laptop.

How to develop a responsive website?

It is not a rocket science to develop a responsive website. It does not need to be hosted on special server, because the trick is not going to happen by the server but the PHP/HTML code script. All adjustments are done in the HTML templates and code generated HTML codes. The developer simply never hard code the width and height of anything but allows it to be moved as per screen setting.

And of course, it will take more developers time, so the cost. And you may have to compromise with the display layouts too. If you do not want to do so, you should develop two versions of your website, for mobile devices and another for desktop devices.

We test the website on computer, android and iPhone browser with different resolutions.

What does it Cost?

It takes approx 20% more time for a responsive website. The part of the websites accessed by the visitors is written with responsive HTML.

How to get it done?

1. Contact us showing your interest. Tell us as more as possible about your requirement. If required have an online discussion through skype / gtalk.
2. We will give a fixed cost estimate if you can provide us a fixed requirement. If you give a rough requirement, we will give a ball park figure. We can write a formal requirement for you at a separate cost.
3. We agree on a price, payment schedule, hiring model, time etc.
4. We start developing the website/app in the agreed way and you pay as per agreed schedule. We take all the trouble to define, analyze, design, develop and test the application. Here is the full website app development process using RP framework.
5. You check the progress on each step and give rectification suggestion whenever required.

- When the application development is complete and it has passed our quality testing you check it finally
- We setup it at client server and keep a watch for few days

Which Hiring Model to Use?

SL	Type of projects / tasks	Suggested-Model
1.	Small / Large Websites with ready modules	Project Based
2.	Large New Websites with some custom modules	Virtual Dedicated
3.	Downloadable / Hosted Web Application Development	Virtual Dedicated
4.	Android & iPhone Development	Project Based
5.	Maintenance of a large website / web application that requires regular and urgent changes/ fixing	Full Dedicated
6.	Maintenance of a medium sized website that requires frequent and urgent changes	Part Dedicated
7.	Maintenance of a small / medium sized website that requires small changes but not too urgent	Usage Based
8.	New feature development for a RP developed site of more than 10 hours estimate (If no dedicated developer is there)	Project Based
9	Managing multiple new projects and maintaining changes in the existing projects (required by an IT company)	Dedicated Team

Why Hire From Us?

• Web Development since 1999

We are in web development since 1999. In 2004 we developed a PHP MVC framework. Worked on almost all popular web technologies. We implemented many innovative ideas to maximize the client's revenue.

- **Reliable - In-house with no Newbies**

We have a dedicated in-house team of 30+ developers. 80% of them are 6+ years experience. 6 of them are 14+ years of experience. Only experienced developers and experts will work on your projects.

- **Complete Solution - Concept to Cash**

We have six 15+ years of experienced experts who will help to add value at different points of the software development life cycle. Execution will be done by experienced developers and technology experts.

- **Built-in-Quality through Lean Practices**

You can't turn a MI phone into an iPhone, once it is built. Because adding qualities as in iPhone requires to be built-in. We have quality checks on every step of the value stream starting right from the code editor.

- **Expertise in Latest Technologies**

We are currently focused on the latest tools, technologies, programming languages, frameworks and microservices architectures for developing web, cloud, desktop and mobile apps.

- **Use of Worldclass Agile Tools**

Only programming technologies do not help. We set up our development pipelines with DevOps tools like Jira, GIT, Docker, Kubernetes and automated testing tools to deliver world-class quality in minimum time.

- **Super Service at India Price**

With the help of experienced and trained resources, 21 years of software development experience, hard work and professional honesty, we provide super service. And still at India Price, as we manage everything from India.

- **History of Serving in the Long Term**

We provide future support. Even if you come back with a small change. **Clients stay with for years.** And in fact employees too. The main reason behind this is we really care about our clients and employees.
