

Joomla CMS Framework

Jomres is a robust, feature rich hotel booking system for websites developed using Joomla frameworks. It has been constantly developed, full-time, for 9 years.

The core system is free, if you want a simple booking or reservation component for your hotel's site then the free core system is all you need to get up and running. If you decide you want to add functionality to your hotel later on then you can upgrade to Jomres Solo, Silver or Gold to allow you to install some of the many plugins available.

We provide customization service for JOMRES systems. You can hire us to make a new custom module for your JOMRES installation.

Why Hire Us?

We can do it at much lower cost than the original developer of the system. We can provide better service at lower cost because we are a India based company and cost of resources here are much lower than in UK.
