

How_part_dedicated_works

We recruit intelligent, well qualified and experienced PHP/MySQL developers and let them work under quality oriented strict supervision. They become available for hiring when they ensure delivering quality works. Here how it works.

1. You hire a part time developer (or project manager) to work at least XX hours just paying a 15 days charge in advance. XX can be any number above 60, depending on your work load decided by you.
2. We provide all web development amenities for your part time developer. We even provide our code library, modules, and framework free for him to use. These have been built and tested in last 13 years.
3. You define the tasks (to do list) in an online shared document. You discuss with the developers (using skype chat / call) to clarify things. You give us access to your site such that we can work. You set priority to every task. These tasks can be simple information change, look change, new module development, urgent bug fixing or anything related to programming.
4. Developers do your work as per your set priority. They do urgent fixing works with top priority, even on holidays. If he is stuck or need some expert help, he will have option to consult other expert developers who you have not hired
5. He will manage a daily log and enter what hours have been spent on what tasks. He will submit the log at month end to you.
6. We will arrange for a replacement developer in case he is ill or he has left the job or you are not satisfied with his works. We will be available for future support even after years.
