

## Optional\_website\_features

Here are some likely additional ready modules / features that you can add to your websites after some sort of customizations. You can add it at the time of the development or later too.

**Slide Shows** - You can have eye catching slide shows in the home page and in other pages

**Image Gallery** - You can organize your photos in categories and sub categories and display those in the form of a gallery each opening in a nice way

**Video Gallery** - If you have a lot of videos to display you can organize those in categories and sub categories and display in the way you want

**Product Gallery** - You can organize your products in categories and sub categories and display those in the form of a gallery along with the product description, price and other info.

**Blog/Article/KB/Info Pages** - You can add a blog / article module that will allow you to create blog/article/ Knowledgebase or any type information pages through your admin panel whenever you want. This module is compatible with Google authorship.

**Forum**- You need a forum module when you want your customers discussing on a topic among them. You will be the admin who will have full control on editing/deleting a thread/message/user if it goes offensive.

**Helpdesk** - You need a helpdesk module when you need to run a delayed and secured discussion with your customers to take care of their problems with your products /services. If you do it through email, you may be lost with too many messages.

**FAQ** - You can add a FAQ module to display the frequently questions and answers in a FAQ style to make it easier for the reader.

**Testimonials** - When you want to tell something about your product/ services in yours customers voice you need a testimonials module.

**News / Events**- This module will allow you enter and display news and events over time

**Custom Features** - You can have your own module developed on a bespoke basis for adding custom feature on your website. It will work in the way you want it. The great benefit of a custom module is it saves the daily management time. Because the solutions are direct and are specific to your requirement.
