

About Remote Programmer

Remote Programmer Private Limited is a web development company registered under Indian Company Act 1956. It has a valid licence to export/import software related services and products. The parent company, Datasoft Solutions was a partnership company started its operation in 1999. The same partners are now the directors of the new private limited company.

We are located in the heart of the city Kolkata, India and at a stone throw distance from E.M. Bypass, the widest road in Kolkata. It is also near Prince Anwar Shah Road, another busy road in Kolkata. So we have an advantage from communication point too. When you come from Airport, you do not need to change the road to reach us, just a 30 minutes drive through E.M. Bypass.

The operation was first started in 1999 with only one computer, by the present directors of the company, Lutfal Hoque and Champa Khatun. We started as a design only company but soon in one year we moved our focus to programming and web based solutions where our actual expertise lies.

Now we are some work alcoholic people working in the company under the same roof. We are still not big as we did not rush for rapid expansion but for stability and quality. Now we have streamlined both and really have a plan for rapid expansion.

We will love to undertake any web based project that can be done with our limited resources, however complex it is. At this moment our focus is only PHP/MySQL/Hybrid PhoneGap/Note.js platform for developing a large web based project that has mobile/desktop extension.

However, we worked with many web technologies like ASP.NET/JAVA/PERL/ColdFusion/python in past years, so it will never an issue for us to understand those systems to move to PHP/MySQL/PhoneGap/Node.js/Python-Django platforms or your new application requires interaction.

Our basic motto is not to make money by hook or by crook. So, we do not put the customer into risk by undertaking project where we are not confident. We don't deliver a project in a way where we can't give future support. We believe in quality system that can be easily maintained in future.

We maintain a strong ethical business policy to build a long term trust relationships with our customers. You can have a look on it at <http://www.remoteprogrammer.com/company-policy/>
