

Why hire a Front End Developer?

It is the front end that a user can see all of a software application. Users interact with software through user interfaces. For a web application users see these interfaces on the browser. And you need Front End Developers to create these user interfaces. It is important to hire a good front end developer to provide better user experience to your users.

Tools & Technologies for front end development

JS frameworks like **REACT, Angular and Vue** are the most popular frontend tools for building user interfaces of an modern decoupled web application. Out of them **REACT** is most popular because of its simplicity, speed & backing by facebook.

However one must be strong in **HTML/CSS/Javascript** to become a good front end developer. HTML, CSS & Javascript have been the core technologies for building web front end since the birth of the internet.

How will a Front End Developer help you?

1. Discuss with with product owner, back end developer and understand the functional requirements at story level
2. Understand the use cases, interfaces, propose the APIs request and associated JSON data
3. Finalise the TDD points (UX/Coding logics as test case units) associated to every objects (interfaces, interface items, fields, actions etc)
4. Finalise code plan and structure
5. Coding and debugging to develop the front end interfaces along with validations and UX logics as defined.
6. Unit testing, functional testing and integration testing
7. Delivering to product owner and/or to test team
8. Help product owner to do the acceptance testing
9. Fixing reported defects at the front end
10. Reporting as required

Skill & experiences of a Front End Developer at RP

1. Intelligent, logical and visually strong
2. B. Tech or MCA or equivalent qualification
3. Good communication skill over email and skype
4. Organised & have good documenting skill
5. 3-9 years experience in web development
6. Strong in relevant front end technologies (REACT along with HTML/CSS/Javascript)

How much does it cost ?

Dedicated hiring starts at \$1150 only. Hourly rates start with \$9 only. However cost is likely to be higher with increase in experience, skillset and past track record

Tips for hiring a Front End Developer

We recommend hiring a separate dedicated front-end developer for a new project and that requires a team. You can also have a dedicated front-end developer for an ongoing project when the team is relatively bigger. If your project is too small or it is in maintenance mode you can hire a full stack developer who can take care of both frontend and backend. Hiring a front developer on part time should be avoided, instead hire a full stack developer.

Why hire a Front End from India?

Cost - the single biggest reason. You can get the same project done at 1/5th or even lesser price if you hire from india.

Why hire from Remote Programmer?

- **We add Lean & DevOps values to your application**

Toyota became world leader in car manufacturing by practicing Lean. Leading businesses today do DevOps (the successor of Lean) automation to minimize the waste. We too can help you in this regard.

- **TDD checklists to ensure Built-in-Quality**

Quality not defined is quality denied. There are some core qualities those must be introduced in the design phase, can never be added after QC process. We add these built-in-quality through TDD checkpoints.

- **Agile platform covering both product and project life cycle**

Most of the project management software takes care of the project life cycle only. Our project cum product management system automates the CMMI processes in agile perspective throughout the product life cycle (PLC).

- **Integrated Requirement Management System**

Our system includes a built in agile requirement development and management system. It helps both you and the developer to extract the software requirements easily in the format that a developer actually needs.

- **Integrated Change Management System**

Change is a must to stay in business. A change can be a bug, an missed out requirement, an improvement or simply a new addition. To report, manage and document a change is important. Our system process takes care of it.

- **Integrated Test Management Platform**

Without a proper testing (verification and validation), there is a little chance that all the functional and non functional requirements will be there in the delivery. We have a built-in system and process to take care of it.

- **System Documentation in the background**

Project execution is one time job, but the delivered product requires future maintenance. It can be too painful if the system logics, flow diagrams, use cases, changes are not documented. We do it in the background.

- **No unpleasant surprises - Estimate Change History**

The fact is, most software projects run in late. There can be many reasons but only one solution. Know the reasons at earliest and act accordingly. We provide anytime estimate change report to act before it surprises you.

- **Full team support lead by 15+ years exp experts**

We have several 15+ years experienced experts who guide the developers in defining the product, processes and design the architecture as required. You get the standards set by the experts but implemented by developers.

- **Defined quality delivery at low India price**

This has been possible because of the availability of high quality skills at India price together with agile practices, process automation, integrated test management with TDD checklists, 5S verification and finally ethical practices.

- **Web Development since 1999**

We are on web since 1999. In 2004, we developed our own MVC framework in PHP. We work with stable frameworks like Yii/Laravel/Phalcon (PHP), d-jango (Python), Express/Node.js and React.js / React Native (Javascript).

- **Future Support Ensured - by default**

We provide future support. Even if you come back with a small change. **Client stay with for years.** Most of our clients are with us for more than 5 years. The main reason we would like to grow with our clients.
